

SBI AURA

Transforming First-Time Banking Customers
into Confident Digital Banking Users

Agentic AI-Powered Digital Adoption

Bridging the gap between **complex banking services** and **customer digital proficiency** through proactive, autonomous guidance.

Executive Summary

STRATEGIC OVERVIEW

The Problem

70% of digital transformation failures

are due to a lack of user adoption. Customers are overwhelmed by feature complexity and manual help centers.

The Solution

SBI AURA

An autonomous **Agentic AI** coach that predicts friction and intervenes in real-time to guide users through complex workflows.

The Pilot

35% Increase in UX-ROI

Targeting "YONO" power users and retail segments to improve feature discovery and transaction success rates.

Mission: To make every SBI customer a 'Power User' of digital banking.

The Digital Adoption Gap

Market Evidence

Feature Underutilization

Adoption Rate (%)

64%

Abandonment Rate

on multi-step digital loan applications due to UI friction.

The "Instructional Fatigue"

Traditional static FAQs and video tutorials have **<5% engagement** during the moment of need.

Support Load

42% of support calls are for "How-to" queries that could be handled via digital self-service.

Journey & Existing Solutions Gap

Why traditional Digital Adoption Platforms (DAP) fail.

Current Solutions (Static)

Hard-coded tooltips (often irrelevant)

Generic walkthroughs (boring)

Reactive Chatbots (user must ask)

✗ One-size-fits-all approach

The AURA Shift (Agentic)

Predictive friction detection

Hyper-personalized micro-guidance

Autonomous action assistance

✓ Real-time adaptive intelligence

Introducing SBI AURA

AURA stands for AI User Relationship Agent

Voice-First Guidance

Multilingual support for rural & urban Bharat.

Sentiment Analysis

Detects rage-clicks or confusion in real-time.

Predictive Tasks

Suggests the next most likely required action.

Safety Guardrails

Prevents accidental transactions or fraud.

Auto-Learning

Adapts coaching style based on user speed.

Sales Integration

Soft-nudges for credit cards/loans at peak interest.

Digital Adoption Score (DAS)

The AURA Intelligence Framework

AURA calculates a real-time **DAS** for every user session to determine the intensity of intervention required.

P

Proficiency

Historical app usage patterns.

C

Complexity

The nature of the current task.

T

Time-on-Task

Deviation from optimal path.

E

Error Rate

Validation failures encountered.

84/100

High Potential

Dynamic Intervention Logic

Low Score = Full Guided Mode

Mid Score = Contextual Tips

High Score = Minimalist Shortcuts

Agentic AI Workflow: A Real Example

Perception

User hovers over "Fixed Deposit" but spends 45 seconds on the interest rate calculator without proceeding.

Cognition & Planning

AURA Reasoner identifies "Uncertainty in yield comparison." Plan: Present a simplified "Tax-Saver vs Regular" comparison.

```
{ "intent": "invest", "blocker":  
  "math_complexity", "action":  
    "offer_comp_table" }
```

Execution

AURA injects a non-intrusive UI bubble: "Based on your balance, the 400-day Amrit Kalash offers 0.5% higher yield. View projection?"

"Let me calculate that for you..."

Planning Engine Architecture

Core Intelligence Model

World State Observation

User profile, session metadata, device telemetry, and current DOM state.

Agentic Reasoning (LLM)

Chain-of-Thought

ReAct Logic

Simulates possible user outcomes before suggesting an action.

Task Orchestration

Triggering UI-walkthroughs, pre-filling APIs, or initiating a voice-assist handoff.

Key Technical Innovations

Zero-Lag Inference

Edge-deployed small models for sub-200ms latency in UI responses.

Deterministic Guardrails

Ensures AI doesn't recommend non-compliant financial advice.

Cross-Platform Sync

Seamless state transition from Mobile App to Web Browser.

Personalization in Action

Case Study: A Student applying for an Education Loan

Arjun, 22

First-time borrower
Digital Native but
Financially Inexperienced

01. Onboarding

"Hi Arjun! I see you're looking for an education loan for MS in USA. Let's simplify the document list for your visa."

02. Intelligent Assistance

AURA detects Arjun is stuck on "Collateral Value." It explains in simple terms: "Think of this as the security you provide for the loan."

03. Proactive Saving

"You qualify for a 0.50% interest concession if you are a girl child or have a specific credit score. Let's apply that."

04. Success

Loan approved. AURA sets up a 'Smart EMI' schedule and automated alerts for Arjun's university fee deadline.

System Architecture Layers

AI Safety & Governance Pillars

Zero Data Leakage

PII (Personally Identifiable Information) is scrubbed at the gateway before reaching the LLM. All processing occurs within SBI's virtual private cloud.

Hallucination Guard

RAG (Retrieval-Augmented Generation) ensures AURA only uses official SBI product manuals and circulars as its source of truth.

Regulatory Alignment

Every recommendation is logged with a 'Reasoning Trace' for auditability by RBI compliance standards.

Human-in-the-Loop (HITL)

For high-value transactions (e.g. Loans > 50 Lakhs), AURA acts as a co-pilot, requiring final confirmation from a human banker before finalization.

KPI Mapping: Capability to Outcome

AURA CAPABILITY

Predictive Intervention

AURA CAPABILITY

Automated Form Assist

AURA CAPABILITY

Smart Cross-Selling

Projected Impact (12-Month Pilot)

Pilot Strategy & Business Impact

PHASE 1

MVP Launch: YONO Retail Loans

Months 1-3

PHASE 2

Corporate & SME Integration

Months 4-6

PHASE 3

Multi-lingual Voice Support

Months 7-9

PHASE 4

Full Ecosystem Scale-up

Months 10-12

Strategic ROI

- ✓ **Lower Acquisition Cost:** Higher self-serve conversion reduces expensive physical channel usage.
- ✓ **Operational Efficiency:** 30% reduction in simple "How-to" support tickets.

Customer LTV

- ✓ **Feature Depth:** Increases products per customer (PPC) from 2.1 to 3.5.
- ✓ **Brand Loyalty:** Digital ease-of-use becomes a key differentiator for Gen-Z.
